### Overview

RCPCH has been using a variety of disparate legacy products and systems to manage their training program, evolution-based assessment, multi-source feedback, continuing professional development (CPD) processes and other administrative needs. The systems were custom-coded, expensive to maintain and costly to change and improve.

Fry’s partnership with RCPCH is a platform that replaces all those systems. The platform is a fully-customizable, cloud-based, multi-dashboard platform which enables them to lower significant costs and administration as well as giving them full control of their training program and CPD.

### Case Study: RCPCH ePortfolio and CPD

**Overview**

RCPCH had been using a variety of disparate, legacy products and systems to manage their training program, evolution-based assessment, multi-source feedback, continuing professional development (CPD) processes and other administrative needs. The systems were custom-coded, expensive to maintain and costly to change and improve.

Fry’s partnership with RCPCH is a platform that replaces all those systems. The platform is a fully-customizable, cloud-based, multi-dashboard platform which enables them to lower significant costs and administration as well as giving them full control of their training program and CPD.

The College has agreed to work with the Fry team to incorporate an exams booking module within the ePortfolio system. Again consolidating yet another legacy system and reducing administration overhead and costs.

### The Challenge

The College now has a modern, flexible platform on which to manage trainees, supervisors and members. Everything is in one place. Bringing together activities such as professional development (CPD) and exam result management. The systems were cumbersome, expensive to maintain and costly to change and improve.

Fry’s partnership with RCPCH is a solution that replaces all those systems. The platform is a fully-customizable, cloud-based, multi-dashboard platform which enables them to lower significant costs and administration as well as giving them full control of their training program and CPD.

### The Solution

Fry’s partnership with RCPCH is a platform that replaces all those systems. The platform is a fully-customizable, cloud-based, multi-dashboard platform which enables them to lower significant costs and administration as well as giving them full control of their training program and CPD.

### The Approach

Fry’s partnership with RCPCH is a platform that replaces all those systems. The platform is a fully-customizable, cloud-based, multi-dashboard platform which enables them to lower significant costs and administration as well as giving them full control of their training program and CPD.

### The Results

Fry’s partnership with RCPCH is a platform that replaces all those systems. The platform is a fully-customizable, cloud-based, multi-dashboard platform which enables them to lower significant costs and administration as well as giving them full control of their training program and CPD.

### The Challenge

RCPCH had been using a variety of disparate legacy products and systems to manage their training program, evolution-based assessment, multi-source feedback, continuing professional development (CPD) processes and other administrative needs. The systems were custom-coded, expensive to maintain and costly to change and improve.

Fry’s partnership with RCPCH is a platform that replaces all those systems. The platform is a fully-customizable, cloud-based, multi-dashboard platform which enables them to lower significant costs and administration as well as giving them full control of their training program and CPD.
